NOVEL COMPOUNDS

The present invention relates to pharmaceutically useful pyrazolo[3,4-*d*]pyrimidinedione compounds, processes for their production, pharmaceutical compositions containing them and their use for the treatment of various diseases.

T-cells play an important role in the immune response, however in autoimmune disease T-cells are activated against particular tissues, e.g. causing the inflammation associated with rheumatoid arthritis. Interleukin-2 (IL-2) is an essential autocrine growth factor for T-cells and hence inhibition of IL-2 transcription is beneficial in the modulation of autoimmune disease. Formation of a transcriptional complex of the protein nuclear factor of activated T-cells-1 (NFAT-1) on the IL-2 promoter is essential for IL-2 transcription. NFAT-1 mediated transcription has therefore been proposed as appropriate molecular target for immunomodulation, Y. Baine *et al.*, *J. Immunol.*, 1995, **154**, 3667–3677. W. F. Michne *et al.*, in *J. Med. Chem.* (1995) **38**, 2557–2569 disclose a number of quinazoline-2,4-diones and pyrrolo[3,4-*d*]pyrimidine-2,4-diones which inhibit transcription regulated by the DNA region bound by the NFAT-1 protein.

According to the invention there is provided a compound of formula (I):

(I)

in which:

R^1 is C_{1-6} alkyl, C_{3-6} alkenyl or C_{3-6} cycloalkyl;

R^2 is C_{1-4} alkyl or C_{3-6} alkenyl;

R^3 is 1- or 2-indanyl, 1- or 2-(1,2,3,4-tetrahydronaphthalenyl), 9-fluorenyl, acenaphthyl or
5 $CHR^4(CH_2)_nAr$ where n is 0 or 1, R^4 is hydrogen or C_{1-6} alkyl and Ar is quinolinyl,
naphthalenyl, benzodioxolinyl optionally substituted by one or more halogen atoms, or
phenyl optionally substituted by one or more substituent groups selected from halogen,
 C_{1-6} alkyl, C_{1-6} alkoxy and phenylsulfonylmethyl;

W is H, CH_2OH , CO_2H , CO_2C_{1-6} alkyl, $CH_2NR^5R^6$, $CONR^5R^6$, where R^5 and R^6 are
10 independently hydrogen or C_{1-6} alkyl, or together with the nitrogen atom to which they are
attached form a 3- to 8-membered heterocyclic ring optionally further containing an oxygen
atom or a group NR^7 where R^7 is hydrogen or C_{1-6} alkyl, or W is pyridyl or phenyl, each of
which may be optionally substituted by one or more substituent groups selected from
halogen, hydroxyl, C_{1-6} alkyl and C_{1-6} alkoxy;

15 X is a bond or C_{1-5} alkylene;

Y is $S(O)_p$, $C\equiv C$, $CH=CH$, CH_2CH_2 or $CH_2CH=CH$; and

p is 0, 1 or 2;

or a pharmaceutically acceptable salt thereof, provided that:

- X is not a bond when W is H, CH_2OH , CO_2H , CO_2C_{1-6} alkyl, $CH_2NR^5R^6$ or $CONR^5R^6$
20 and Y is sulfur.

Alkyl and alkenyl groups whether alone or as part of another group, may be linear or
branched. As defined herein alkenyl groups are those where the double bond is not
adjacent to a heteroatom.

25

Suitably R^1 is C_{1-6} alkyl, C_{3-6} alkenyl or C_{3-6} cycloalkyl. Preferably R^1 is a C_{1-4} alkyl or
 C_{3-4} alkenyl group such as methyl, ethyl, propyl, butyl, 2-methyl-1-propyl, propenyl, butenyl
or 2-methyl-2-propenyl.

Suitably R^2 is C_{1-4} alkyl (e.g. methyl, ethyl, propyl, butyl or 2-methyl-1-propyl) or C_{3-6} alkenyl (e.g. propenyl, butenyl, pentenyl, hexenyl or 2-methyl-2-propenyl). Preferably R^2 is C_{1-4} alkyl, most preferably methyl.

5 Suitably R^3 is 1- or 2-indanyl, 1- or 2-(1,2,3,4-tetrahydronaphthalenyl), 9-fluorenyl, acenaphthyl or $CHR^4(CH_2)_nAr$ where n is 0 or 1, R^4 is hydrogen or C_{1-6} alkyl (e.g. methyl, ethyl, propyl, butyl, pentyl or hexyl) and Ar is quinolinyl, naphthalenyl, benzodioxolinyl optionally substituted by one or more, e.g. one, two or three, halogen atoms (e.g. fluorine, chlorine or bromine), or phenyl optionally substituted by one or more, e.g. one to four,
10 preferably one or two, substituent groups selected from halogen (e.g. fluorine, chlorine or bromine), C_{1-6} alkyl (e.g. methyl, ethyl, propyl, butyl, pentyl or hexyl), C_{1-6} alkoxy (e.g. methoxy, ethoxy, propoxy or butoxy) and phenylsulfonylmethyl.

Preferably R^3 is $CHR^4(CH_2)_nAr$ where n is 0, R^4 is hydrogen and Ar is quinolinyl,
15 naphthalenyl, benzodioxolinyl substituted by one or more halogen atoms, or phenyl substituted by one or more substituent groups selected from halogen atoms and phenylsulfonylmethyl.

Suitably W is H, CH_2OH , CO_2H , CO_2C_{1-6} alkyl, preferably CO_2C_{1-4} alkyl (e.g. CO_2CH_3 ,
20 $CO_2C_2H_5$, $CO_2C_3H_7$ or $CO_2C_4H_9$), $CH_2NR^5R^6$, $CONR^5R^6$, where R^5 and R^6 are independently hydrogen or C_{1-6} alkyl (e.g. methyl, ethyl, propyl, butyl, pentyl or hexyl), or together with the nitrogen atom to which they are attached form a 3- to 8-membered heterocyclic ring optionally further containing an oxygen atom or a group NR^7 where R^7 is hydrogen or C_{1-6} alkyl (e.g. methyl, ethyl, propyl, butyl, pentyl or hexyl), or W is pyridyl or
25 phenyl, each of which may be optionally substituted by one or more, e.g. one, two or three, substituent groups selected from halogen (e.g. fluorine, chlorine or bromine), hydroxyl, C_{1-6} alkyl (e.g. methyl, ethyl, propyl, butyl, pentyl or hexyl) and C_{1-6} alkoxy (e.g. methoxy, ethoxy, propoxy or butoxy).

Examples of groups where R^5 and R^6 form a 3- to 8-membered heterocyclic ring include piperidine, morpholine and piperazine rings.

Preferably W is H, CH_2OH , CO_2H , $CO_2C_{1-6}alkyl$ or pyridyl.

5

Suitably X is a bond or $C_{1-5}alkylene$, preferably $C_{1-3}alkylene$.

Suitably Y is $S(O)_p$ where p is 0, 1 or 2, $C\equiv C$, $CH=CH$, CH_2CH_2 or $CH_2CH=CH$.

Preferably Y is sulfur or CH_2CH_2 .

10

A preferred subset of compounds of formula (I) is one in which R^1 is $C_{1-4}alkyl$ or $C_{3-4}alkenyl$; R^2 is $C_{1-4}alkyl$; R^3 is $CHR^4(CH_2)_nAr$ where n is 0 or 1, R^4 is hydrogen or $C_{1-6}alkyl$ and Ar is quinoliny, naphthalenyl, benzodioxoliny optionally substituted by one or more halogen atoms, or phenyl optionally substituted by one or more substituent groups
15 selected from halogen, $C_{1-6}alkyl$, $C_{1-6}alkoxy$ and phenylsulfonylmethyl; W is H, CH_2OH , CO_2H , $CO_2C_{1-6}alkyl$ or pyridyl; X is a bond or $C_{1-3}alkylene$; and Y is sulfur or CH_2CH_2 , provided that:

- X is not a bond when W is H, CH_2OH , CO_2H or $CO_2C_{1-6}alkyl$ and Y is sulfur.

20 An especially preferred subset of compounds of formula (I) is one in which R^1 is C_4alkyl or $C_4alkenyl$; R^2 is methyl; R^3 is $CHR^4(CH_2)_nAr$ where n is 0, R^4 is hydrogen and Ar is quinoliny, naphthalenyl, benzodioxoliny optionally substituted by one or more chlorine atoms, or phenyl optionally substituted by one or more substituent groups selected from halogen and phenylsulfonylmethyl; W is H, CH_2OH , CO_2H , CO_2CH_3 or 2-pyridyl; X is a
25 bond or $C_{1-3}alkylene$; Y is sulfur or CH_2CH_2 , provided that:

- X is not a bond when W is H, CH_2OH , CO_2H or CO_2CH_3 and Y is sulfur.

Particularly preferred compounds of the invention include:

3-[(3-Hydroxypropyl)thio]-5-methyl-7-(2-methyl-2-propenyl)-2-(1-naphthalenylmethyl)-2H-pyrazolo[3,4-d]pyrimidine-4,6[5H,7H]-dione,
30

5-Methyl-7-(2-methyl-2-propenyl)-2-(1-naphthalenylmethyl)-3-[(2-pyridinyl)thio]-2H-pyrazolo[3,4-d]pyrimidine-4,6(5H,7H)-dione,

3-[(2-Hydroxyethyl)thio]-5-methyl-7-(2-methyl-2-propenyl)-2-(1-naphthalenylmethyl)-2H-pyrazolo[3,4-d]pyrimidine-4,6(5H,7H)-dione,

5 3-(4-Hydroxybutyl)-5-methyl-7-(2-methylpropyl)-2-(1-naphthalenylmethyl)-2H-pyrazolo[3,4-d]pyrimidine-4,6(5H,7H)-dione,

5-Methyl-7-(2-methylpropyl)-2-(1-naphthalenylmethyl)-3-propylthio-2H-pyrazolo[3,4-d]pyrimidine-4,6(5H,7H)-dione,

10 3-[(3-Hydroxypropyl)thio]-5-methyl-7-(2-methylpropyl)-2-(1-naphthalenylmethyl)-2H-pyrazolo[3,4-d]pyrimidine-4,6(5H,7H)-dione,

Methyl 4-[(4,5,6,7-tetrahydro-5-methyl-7-{2-methylpropyl}-2-{1-naphthalenylmethyl}-4,6-dioxo-2H-pyrazolo[3,4-d]pyrimidin-3-yl)thio]butanoic acid,

4-[(4,5,6,7-tetrahydro-5-methyl-7-{2-methylpropyl}-2-{1-naphthalenylmethyl}-4,6-dioxo-2H-pyrazolo[3,4-d]pyrimidin-3-yl)thio]butanoic acid,

15 3-[(3-Hydroxypropyl)thio]-5-methyl-7-(2-methylpropyl)-2-(2-{phenylsulfonylmethyl}phenylmethyl)-2H-pyrazolo[3,4-d]pyrimidine-4,6(5H,7H)-dione,

2-({5-Chlorobenzo[1,3]dioxol-6-yl}methyl)-3-[(3-hydroxypropyl)thio]-5-methyl-7-(2-methylpropyl)-2H-pyrazolo[3,4-d]pyrimidine-4,6(5H,7H)-dione,

20 2-(3-Chloro-2-fluorophenylmethyl)-3-[(3-hydroxypropyl)thio]-5-methyl-7-(2-methylpropyl)-2H-pyrazolo[3,4-d]pyrimidine-4,6(5H,7H)-dione, and

3-[(3-Hydroxypropyl)thio]-5-methyl-7-(2-methylpropyl)-2-(2-quinolinylmethyl)-2H-pyrazolo[3,4-d]pyrimidine-4,6(5H,7H)-dione,

and pharmaceutically acceptable salts thereof.

25 Compounds of the invention can form pharmaceutically acceptable salts. The compounds of the formula (I) can form acid addition salts with acids, such as conventional pharmaceutically acceptable acids, for example, maleic, hydrochloric, hydrobromic, phosphoric, acetic, fumaric, salicylic, citric, lactic, oxalic, mandelic, tartaric and methanesulfonic acids.

Certain compounds of formula (I) are capable of existing in stereoisomeric forms including enantiomers and the invention extends to each of these stereoisomeric forms and to mixtures thereof including racemates. The different stereoisomeric forms may be separated one from the other by the usual methods, or any given isomer may be obtained by stereospecific or asymmetric synthesis. The invention also extends to any tautomeric forms and mixtures thereof.

According to a further aspect of the invention there is also provided a process for the preparation of a compound of formula (I) which comprises:

(a) reaction of a compound of formula (II):

(II)

in which R¹, R² and R³ are as defined in formula (I) with a compound of formula (III):

in which L is a leaving group, Y is sulphur, and X and W are as defined in formula (I), or
 (b) when Y is CH₂CH₂ or CH₂CH=CH and R³ is CHR⁴(CH₂)_nAr, reaction of a compound of formula (IV):

(IV)

in which $R^{3'}$ is a precursor to the R^3 group $CHR^4(CH_2)_nAr$ and R^1 and R^2 are as defined in formula (I), with a compound of formula (V):

5

in which Y is CH_2CH_2 or $CH_2CH=CH$ and W and X are as defined in formula (I), or

(c) when Y is $C\equiv C$, $CH=CH$ or $CH_2CH=CH$, reacting a compound of formula (VI):

10

(VI)

15 in which L^1 represents a leaving group and R^1 , R^2 and R^3 are as defined in formula (I) with a compound of formula (VII) or (VIII):

20

wherein, in formula (VII), X^a is a bond or C_{1-6} alkylene and W is as defined in formula (I), and wherein, in formula (VIII), W and X are as defined in formula (I), and optionally thereafter:

- converting the compound of formula (I) to a further compound of formula (I), and/or
- forming a pharmaceutically acceptable salt.

The reaction of compounds of formulae (II) and (III) is typically carried out by treating the
5 compound of formula (II) with a suitable base in an inert solvent at reduced temperature. Suitable bases include lithium diisopropylamide (LDA) in tetrahydrofuran (THF) at or below -40°C . Preferred leaving groups L include sulfinates, tosyl or tolylsulfinyl. Alternatively when Y is sulfur, the leaving group itself may be a group of formula Y-X-W such that the compound of formula (III) is a dimer of formula W-X-S-S-X-W.

10

Compounds of formulae (IV) and (V) are suitably reacted in an inert solvent such as dimethylformamide (DMF) at elevated temperature, for example at reflux. The group $\text{R}^{3'}$ is a suitable precursor to R^3 in compounds of formula (I) such that $\text{R}^{3'}$ is an alkylidene precursor to R^3 .

15

Compounds of formula (I) in which Y represents sulphur can be converted to further compounds of formula (I) in which Y represents SO or SO_2 by an oxidation reaction using, for example, as oxidising agent 3-chloroperoxybenzoic acid or potassium peroxymonosulphate (commercially sold under the trade mark "OXONE").

20

Compounds of formula (II) can be prepared by reaction of a compound of formula (IX):

(IX)

25

in which R^1 and R^2 are as defined in formula (I) with a compound of formula (X):

5 in which L^2 is a leaving group and R^3 is as defined in formula (I).

Reaction of compounds of formula (IX) and (X) is suitably carried out in the presence of a base such as sodium or potassium carbonate in a suitable solvent such as acetone. Suitable leaving groups L^2 include halogen.

10

Compounds of formula (IX) can be prepared by reaction of a compound of formula (XI):

15

(XI)

in which R^1 and R^2 are as defined in formula (I) with dimethylformamide dimethylacetal at elevated temperature, for example at about 90°C or with phosphorus oxychloride (POCl₃) in dimethylformamide (DMF) at about 0°C.

20

Compounds of formula (XI) can be prepared using standard procedures known in the art, for example, by treating the corresponding halide with hydrazine hydrate.

Compounds of formula (IV) can be prepared by reacting a compound of formula (XI) as
25 defined above with a compound of formula (XII):

in which Ar, n and R⁴ are as defined in formula (I).

- 5 Reaction of compounds of formula (VI) and (VII) can be carried out in the presence of Pd(OAc)₂/P(O-Tol)₃ in the presence of a base such as triethylamine in a suitable solvent such as acetonitrile. A mixture of compounds of formula (I) are obtained where X' is X as defined in formula (I) minus one carbon atom:

10

Compounds of formula (VI) and (VIII) can be reacted in the presence of a palladium catalyst with copper iodide in the presence of a base such as triethylamine in a suitable solvent such as acetonitrile. Preferred catalysts include Pd(Ph₃P)₂Cl₂.

15

Compounds of formula (VI) can be prepared by reacting a compound of formula (XIII):

20

in which R¹, R² and R³ are as defined in formula (I), with a base followed by a halogen (e.g. iodine) to become the group L¹. A compound of formula (XIII) can be treated with an

organic base such as lithium diisopropylamide (LDA) in an inert solvent such as tetrahydrofuran (THF) at reduced temperature, for example at about - 70°C. Iodine is then added and the reaction mixture allowed to warm to ambient temperature.

- 5 Compounds of formula (I) can be converted to further compounds of formula (I) using procedures known in the art. For example the reaction products of process (c) can be hydrogenated to give compounds of formula (I) where X/Y form an alkylene chain. Alternatively compounds of formula (I) where Y is $C\equiv C$ can be hydrogenated using a lindlar catalyst to the corresponding compounds of formula (I) where Y is $C=C$.

10

The group W can also be interconverted, for example when W is CO_2H , compounds of formula (I) can be converted to compounds of formula (I) where W is $CO_2C_{1-6}alkyl$, $CONR^5R^6$ or $CH_2NR^5R^6$. When W is CH_2OH compounds of formula (I) can be converted to compounds of formula (I) where W is $CH_2NR^5R^6$. Suitable procedures for these

- 15 conversions are shown in the scheme below:

20

Compounds of formulae (III), (V), (VII), (VIII), (X) and (XII) are either commercially available, are well known in the literature or may be prepared easily using known techniques.

5 Novel intermediate compounds form a further aspect of the invention.

It will be appreciated by those skilled in the art that in the process steps described above the functional groups of intermediate compounds may need to be protected by protecting groups. The protection of functional groups may take place before any of the process steps
10 hereinbefore described. Protecting groups may be removed following a reaction step or at the end of the reaction process using techniques which are well known to those skilled in the art. The use of protecting groups is fully described in "Protective Groups in Organic Chemistry", edited by J W F McOmie, Plenum Press (1973), and "Protective Groups in Organic Synthesis", 2nd edition, T W Greene & P G M Wuts, Wiley-Interscience (1991).

15

Salts of the compounds of formula (I) may be formed by reacting the free acid, or a salt thereof, or the free base, or a salt thereof, with one or more equivalents of the appropriate base or acid. The reaction may be carried out in a solvent or medium in which the salt is insoluble or in a solvent in which the salt is soluble, e.g. ethanol, tetrahydrofuran or diethyl
20 ether, which may be removed *in vacuo*, or by freeze drying. The reaction may also be a metathetical process or it may be carried out on an ion exchange resin. The non-toxic physiologically acceptable salts are preferred, although other salts may be useful, e.g. in isolating or purifying the product.

25 The compounds of the present invention are advantageous in that they possess pharmacological activity. They are therefore indicated as pharmaceuticals for use in the (prophylactic) treatment of autoimmune, inflammatory, proliferative and hyperproliferative diseases and immunologically-mediated diseases including rejection of transplanted organs or tissues and Acquired Immunodeficiency Syndrome (AIDS). Examples of these
30 conditions are:

- (1) **(the respiratory tract)** reversible obstructive airways diseases including asthma, such as bronchial, allergic, intrinsic, extrinsic and dust asthma, particularly chronic or inveterate asthma (e.g. late asthma and airways hyper-responsiveness); bronchitis; acute, allergic, atrophic rhinitis and chronic rhinitis including rhinitis caseosa, hypertrophic rhinitis, rhinitis purulenta, rhinitis sicca and rhinitis medicamentosa; membranous rhinitis including croupous, fibrinous and pseudomembranous rhinitis and scrofulous rhinitis; seasonal rhinitis including rhinitis nervosa (hay fever) and vasomotor rhinitis; sarcoidosis, farmer's lung and related diseases, fibroid lung and idiopathic interstitial pneumonia;
- (2) **(bone and joints)** rheumatoid arthritis, seronegative spondyloarthropathies (including ankylosing spondylitis, psoriatic arthritis and Reiter's disease), Behcet's disease, Sjogren's syndrome and systemic sclerosis;
- (3) **(skin)** psoriasis, atopic dermatitis, contact dermatitis and other eczematous dermatides, seborrhoetic dermatitis, Lichen planus, Pemphigus, bullous Pemphigus, Epidermolysis bullosa, urticaria, angiodermas, vasculitides, erythemas, cutaneous eosinophilias, uveitis, Alopecia areata and vernal conjunctivitis;
- (4) **(gastrointestinal tract)** Coeliac disease, proctitis, eosinophilic gastro-enteritis, mastocytosis, Crohn's disease, ulcerative colitis, food-related allergies which have effects remote from the gut, e.g., migraine, rhinitis and eczema;
- (5) **(other tissues and systemic disease)** multiple sclerosis, atherosclerosis, Acquired Immunodeficiency Syndrome (AIDS), lupus erythematosus, systemic lupus erythematosus, Hashimoto's thyroiditis, myasthenia gravis, type I diabetes, nephrotic syndrome, eosinophilia fascitis, hyper IgE syndrome, lepromatous leprosy, sezary syndrome and idiopathic thrombocytopenia purpura;

(6) (**allograft rejection**) acute and chronic following for example transplantation of kidney, heart, liver, lung, bone marrow, skin and cornea; and chronic graft versus host disease.

5 The compounds of the invention are also indicated for use as antimicrobial agents, and thus may be used in the treatment of diseases caused by pathogenic micro-organisms.

Accordingly, the present invention provides a compound of formula (I), or a pharmaceutically acceptable salt thereof, as hereinbefore defined for use in therapy.

10

In another aspect, the invention provides the use of a compound of formula (I), or a pharmaceutically acceptable salt thereof, as hereinbefore defined in the manufacture of a medicament for use in therapy.

15 In particular, the present invention provides the use of a compound of formula (I), or a pharmaceutically acceptable salt thereof, as hereinbefore defined in the manufacture of an immunosuppressive pharmaceutical composition. The compounds of the invention can also be administered in combination with other immunosuppressants known in the art such as FK506 and Cyclosporin.

20

According to a further aspect of the invention there is provided the use of a compound of formula (I), as hereinbefore defined, or a pharmaceutically acceptable salt thereof, in the manufacture of a medicament for the treatment of a reversible obstructive airways disease.

25 For the above-mentioned therapeutic uses the dosage administered will, of course, vary with the compound employed, the mode of administration, the treatment desired and the disease indicated.

• According to the invention there is further provided a pharmaceutical composition
30 comprising preferably from 0.05 to 99 % w (per cent by weight), e.g. less than 80 % w, and

more preferably from 0.1 to 70 % w, e.g. less than 50 % w, of a compound of formula (I), or a pharmaceutically acceptable salt thereof, as defined above in combination with a pharmaceutically acceptable diluent or carrier.

- 5 The invention further provides a process for the preparation of a pharmaceutical composition of the invention which comprises mixing a compound of formula (I), or a pharmaceutically-acceptable salt thereof, as hereinbefore defined with a pharmaceutically acceptable diluent or carrier.
- 10 The pharmaceutical composition of the invention may be administered topically (e.g. to the lung and/or airways or to the skin) in the form of solutions, suspensions, heptafluoroalkane aerosols and dry powder formulations; or systemically, e.g. by oral administration in the form of tablets, capsules, syrups, powders or granules, or by parenteral administration in the form of solutions or suspensions, or by subcutaneous administration or by rectal
- 15 administration in the form of suppositories or transdermally.

According to a further aspect of the invention, there is provided a method of effecting immunosuppression which comprises administering to a patient a therapeutically effective amount of a compound of formula (I), or a pharmaceutically acceptable salt thereof, as

20 defined above.

The invention is illustrated by the following examples.

Example 1**3-[(3-Hydroxypropyl)thio]-5-methyl-7-(2-methyl-2-propenyl)-2-(1-naphthalenylmethyl)-2H-pyrazolo[3,4-d]pyrimidine-4,6[5H,7H]-dione****5 (a) 1-Methylbarbituric acid**

Acetic anhydride (17 ml) was added to a solution of malonic acid (10 g) and methylurea (6.25 g) in acetic acid (23 ml) at 65°C. The mixture was heated to 90-95°C for 3 hours then cooled to room temperature. The resulting solution was concentrated under reduced pressure and the residue was redissolved in ethanol (50 ml). Ether (5 ml) was added and the mixture was allowed to stand for 16 hours at room temperature before being chilled for 4 hours at 4°C. The precipitated solid was filtered and washed with ether. The solid was redissolved in warm water (50 ml) and the solution concentrated under reduced pressure until solid started to precipitate. The mixture was cooled to room temperature and the solid that formed was collected and dried *in vacuo* to give the sub-title compound (3.34 g) as a solid.

Melting point: 130-131°C

MS (EI) 142 (M⁺)

¹H NMR (DMSO-d₆) δ 3.05 (3H, s); 3.58 (2H, s); 11.33 (1H, s, br).

20 (b) 6-Chloro-3-methylpyrimidine-2,4[1H,3H]-dione

1-Methylbarbituric acid (10 g) was suspended in phosphorus oxychloride (70 ml). Water (2 ml) was added and the mixture was heated at reflux for 40 minutes. The reaction was allowed to cool and was then concentrated under reduced pressure. The residue was poured onto a mixture of ice and water (200 ml). When the ice had melted, the precipitated

solid was collected, washed with water and dried *in vacuo* at 50°C to give the sub-title compound (6.86 g) as a yellow solid.

MS (EI) 160/162 (M^+)

5

(c) 6-Hydrazino-3-methyl-1-(2-methyl-2-propenyl)pyrimidine-2,4[1H,3H]-dione

3-Bromo-2-methylpropene (1.65 ml) and potassium carbonate (4.00 g) were added to a solution of 6-chloro-3-methylpyrimidine-2,4[1H,3H]-dione (2.00 g) in acetone (50 ml). The mixture was heated at reflux for 24 hours and then cooled to room temperature. The solution was filtered and the solid was washed with acetone ($2 \times 25\text{ml}$). The combined filtrate was concentrated under reduced pressure to give a yellow solid (1.25 g). This was redissolved in ethanol (15 ml) and hydrazine hydrate (5 ml) was added. The mixture was heated at reflux for 15 minutes, allowed to cool to room temperature, and then evaporated under reduced pressure. The residue was coevaporated with ethanol ($2 \times 20\text{ml}$) under reduced pressure and was then recrystallised from ethanol to give the subtitle compound (0.75 g).

(f) 3-[(3-Hydroxypropyl)thio]-5-methyl-7-(2-methyl-2-propenyl)-2-(1-naphthalenylmethyl)-2H-pyrazolo[3,4-d]pyrimidine-4,6[5H,7H]-dione

A solution of lithium diisopropylamide (1.12 mmol) in tetrahydrofuran (6 ml) was added dropwise to a stirred solution of 5-methyl-7-(2-methyl-2-propenyl)-2-(1-naphthalenylmethyl)-2H-pyrazolo[3,4-d]pyrimidine-4,6[5H,7H]-dione (0.20 g) and 3-[[dimethyl(1,1-dimethylethyl)silyl]oxy}propyl 4-methylphenylthiosulfonate (J. Med. Chem. 1995, 38, 2557) (0.262 g) in anhydrous tetrahydrofuran (20 ml) at -70 °C.

The solution was stirred for a further 1 hour at -70°C and then allowed to warm to room temperature. Saturated aqueous sodium bicarbonate solution (10 ml) was added and the mixture was extracted with ethyl acetate. The organic extracts were dried over anhydrous magnesium sulfate, filtered and evaporated under reduced pressure. The residual oil was purified by column chromatography over silica eluting with acetone : hexane (1:5). The product was dissolved in acetonitrile (5 ml) and treated with 40% aqueous hydrofluoric

acid (1 ml). After 5 minutes, the solution was neutralised with aqueous sodium bicarbonate solution and extracted with ethyl acetate. The organic extracts were washed with saturated aqueous sodium bicarbonate solution, dried over anhydrous magnesium sulfate, filtered and evaporated under reduced pressure. The residue was purified by column chromatography over silica eluting with acetone : hexane (1:5 then 1:3) followed by recrystallisation from diethyl ether/hexane to give the title compound (0.11 g).

Melting point: 138–139°C

Example 8

4-[(4,5,6,7-tetrahydro-5-methyl-7-{2-methylpropyl}-2-{1-naphthalenylmethyl}-4,6-dioxo-2H-pyrazolo[3,4-d]pyrimidin-3-yl)thio]butanoic acid

Lithium hydroxide monohydrate (80 mg) was added to a solution of methyl 4-[(4,5,6,7-tetrahydro-5-methyl-7-{2-methylpropyl}-2-{1-naphthalenylmethyl}-4,6-dioxo-2H-pyrazolo[3,4-d]pyrimidin-3-yl)thio]butanoic acid (250 mg) in tetrahydrofuran (20 ml) and water was then added to give a homogeneous solution. After 18 hours the reaction mixture was partitioned between ether and 2 M sodium hydroxide. The aqueous phase was acidified with concentrated hydrochloric acid and extracted with ethyl acetate which was then dried over magnesium sulfate. The organic phase was concentrated *in vacuo* and recrystallised from cyclohexane : ethyl acetate to give the title compound (130 mg).

Melting point: 149°C

MS (+ve APCI) 481 ((M+H)⁺)

¹H NMR (DMSO d₆) δ 0.84 (6H, d), 1.65 (2H, quint), 2.10-2.25 (3H, m), 3.20-3.25 (5H, m), 3.74 (2H, d), 5.99 (2H, s), 6.90 (1H, d), 7.45 (1H, t), 7.55-7.65 (2H, m), 7.89 (1H, d), 7.98 (1H, dd), 8.29 (1H, dd).

5 **Example 9**

3-[(3-Hydroxypropyl)thio]-5-methyl-7-(2-methylpropyl)-2-(2-phenylsulfonylmethyl)phenylmethyl)-2H-pyrazolo[3,4-d]pyrimidine-4,6(5H,7H)-dione

10 **(a) 3-[(3-Hydroxypropyl)thio]-5-methyl-7-(2-methylpropyl)-1H-pyrazolo[3,4-d]pyrimidine-4,6(5H,7H)-dione**

Lithium diisopropylamide (10.7 mmol) was added to a solution of 2-(4-methoxyphenylmethyl)-5-methyl-7-(2-methylpropyl)-2H-pyrazolo[3,4-d]pyrimidine-4,6(5H,7H)-dione (1.83 g) and 3-{[dimethyl(1,1-dimethylethyl)silyl]oxy}propyl 4-methylphenylthiosulfonate (J. Med. Chem. 1995, 38, 2557) (3.0 g) in tetrahydrofuran (30 ml) at -78°C. After 1.5 hours the reaction mixture was warmed to ambient temperature and after a further 2 hours water was added. The reaction mixture was diluted with ethyl acetate and washed twice with dilute hydrochloric acid, twice with saturated sodium hydrogen carbonate solution, once with brine and then dried over magnesium sulfate and concentrated *in vacuo*. The residue was dissolved in trifluoroacetic acid (10 ml) and heated to 100°C for 4 hours. The mixture was allowed to cool and was then evaporated under reduced pressure. The residue was dissolved in methanol (30 ml), saturated sodium hydrogen carbonate (1.1 g) was added, and the mixture was stirred at room temperature for 1 hour and then evaporated under reduced pressure. The resultant residue was dissolved in

15
20

ethyl acetate and washed once with saturated sodium hydrogen carbonate solution, twice with brine, then dried over magnesium sulfate and concentrated *in vacuo*. Chromatography on silica gel (isohexane : ethyl acetate 1:2) gave the title compound (1.0 g).

Melting point: 103-9°C

5 MS (+ve APCI) 313 ((M+H)⁺)

¹H NMR (DMSO d₆) δ 0.87 (6H, d), 1.70 (2H, vbrs), 2.20 (1H, vbrs), 3.18 (5H, s), 3.47 (2H, t), 3.70 (2H, d).

(b) 3-[(3-Hydroxypropyl)thio]-5-methyl-7-(2-methylpropyl)-2-(2-
10 {phenylsulfonylmethyl}phenylmethyl)-2H-pyrazolo[3,4-d]pyrimidine-4,6(5H,7H)-
dione

3-[(3-Hydroxypropyl)thio]-5-methyl-7-(2-methylpropyl)-1H-pyrazolo[3,4-d]-
pyrimidine-4,6(5H,7H)-dione (94 mg), potassium carbonate (90 mg) and
2-(phenylsulfonylmethyl)benzyl bromide (105 mg) were combined in dimethylsulfoxide
15 (11 ml). After 5 hours at room temperature the reaction mixture was diluted with ethyl
acetate and washed thrice with water, twice with dilute hydrochloric acid, once with brine,
then dried over magnesium sulfate and then concentrated *in vacuo*. Chromatography on
silica gel (isohexane : isopropanol 4:1) gave the title compound (70 mg).

Melting point: 50°C (foam)

20 MS (+ve APCI) 557 ((M+H)⁺)

¹H NMR (DMSO d₆) δ 0.81 (6H, d), 1.54 (2H, quint), 2.12 (1H, m), 3.19 (2H, t),
3.22 (3H, s), 3.37 (2H, q), 3.68 (2H, d), 4.48 (1H, t), 5.00 (2H, s), 5.61 (2H, s),
6.70 (1H, d), 7.13 (1H, d), 7.2-7.3 (2H, m), 7.65 (2H, t), 7.78 (1H, t), 7.82 (2H, d).

25 The following compounds were prepared following the method of Example 9(b) using
3-[(3-hydroxypropyl)thio]-5-methyl-7-(2-methylpropyl)-1H-pyrazolo[3,4-d]pyrimidine-
4,6(5H,7H)-dione and the appropriate halide.

Pharmacological data

Example 13

Inhibition of Human Mixed Lymphocyte Reaction (MLR)

5 The MLR test was performed in 96-well flat bottomed microtitre plates. Compounds were prepared as 10 mM stock solution in dimethyl sulphoxide. A 50 fold dilution of this was prepared in RPMI. Serial dilutions were prepared from this solution. 10 µl of the 50 fold
10 diluted stock, or dilutions of it, were added to the well to give concentrations in the assay starting at 9.5 µM and going down. Into each well was placed 1.5×10^5 cells from each of two responding donors in a final volume of 0.2 ml RPMI 1640 medium supplemented with 10% human serum, 2 mM L-glutamine and penicillin/streptomycin. The cells were incubated at 37 °C in a humidified atmosphere at 5% carbon dioxide for 120 hours.
15 ³H-Thymidine (0.5 µCi) was added for the final 6 hours of the incubation. The level of radioactivity incorporated by the cells was then determined, which is a measure of T-cell proliferation.

The title compounds of Examples 1 to 12 were found to exhibit an IA_{50} value of less than 1×10^{-6} M in the above test.

CLAIMS

1. A compound of formula (I):

(I)

in which:

R¹ is C₁₋₆alkyl, C₃₋₆alkenyl or C₃₋₆cycloalkyl;

10 R² is C₁₋₄alkyl or C₃₋₆alkenyl;

R³ is 1- or 2-indanyl, 1- or 2-(1,2,3,4-tetrahydronaphthalenyl), 9-fluorenyl, acenaphthyl or CHR⁴(CH₂)_nAr where n is 0 or 1, R⁴ is hydrogen or C₁₋₆alkyl and Ar is quinolinyl, naphthalenyl, benzodioxolinyl optionally substituted by one or more halogen atoms, or phenyl optionally substituted by one or more substituent groups selected from halogen, C₁₋₆alkyl, C₁₋₆alkoxy and phenylsulfonylmethyl;

15 W is H, CH₂OH, CO₂H, CO₂C₁₋₆alkyl, CH₂NR⁵R⁶, CONR⁵R⁶, where R⁵ and R⁶ are independently hydrogen or C₁₋₆alkyl, or together with the nitrogen atom to which they are attached form a 3- to 8-membered heterocyclic ring optionally further containing an oxygen atom or a group NR⁷ where R⁷ is hydrogen or C₁₋₆alkyl, or W is pyridyl or phenyl, each of which may be optionally substituted by one or more substituent groups selected from halogen, hydroxyl, C₁₋₆alkyl and C₁₋₆alkoxy;

X is a bond or C₁₋₅alkylene;

Y is S(O)_p, C≡C, CH=CH, CH₂CH₂ or CH₂CH=CH; and

p is 0, 1 or 2;

25 or a pharmaceutically acceptable salt thereof, provided that:

- X is not a bond when W is H, CH₂OH, CO₂H, CO₂C₁₋₆alkyl, CH₂NR⁵R⁶ or CONR⁵R⁶ and Y is sulfur.

2. A compound according to claim 1, wherein R¹ is C₁₋₄alkyl or C₃₋₄alkenyl.

3. A compound according to claim 1 or claim 2, wherein R² is C₁₋₄alkyl.

4. A compound according to any one of claims 1 to 3, wherein R³ is CHR⁴(CH₂)_nAr in which n is 0, R⁴ is hydrogen and Ar is quinolinyl, naphthalenyl, benzodioxolinyl

substituted by one or more halogen atoms, or phenyl substituted by one or more substituent groups selected from halogen atoms and phenylsulfonylmethyl.

5. A compound according to any one of the preceding claims, wherein Y is sulfur or CH₂CH₂.

6. A compound according to any one of the preceding claims, wherein X is C₁₋₃alkylene.

7. A compound according to any one of the preceding claims, wherein W is H, CH₂OH, CO₂H, CO₂C₁₋₆alkyl or pyridyl.

8. A compound according to claim 1 which is:

3-[(3-Hydroxypropyl)thio]-5-methyl-7-(2-methyl-2-propenyl)-2-(1-naphthalenylmethyl)-2H-pyrazolo[3,4-d]pyrimidine-4,6[5H,7H]-dione, or

5-Methyl-7-(2-methyl-2-propenyl)-2-(1-naphthalenylmethyl)-3-[(2-pyridinyl)thio]-2H-pyrazolo[3,4-d]pyrimidine-4,6[5H,7H]-dione, or

3-[(2-Hydroxyethyl)thio]-5-methyl-7-(2-methyl-2-propenyl)-2-(1-naphthalenylmethyl)-2H-pyrazolo[3,4-d]pyrimidine-4,6[5H,7H]-dione, or

3-(4-Hydroxybutyl)-5-methyl-7-(2-methylpropyl)-2-(1-naphthalenylmethyl)-2H-pyrazolo[3,4-d]pyrimidine-4,6[5H,7H]-dione, or

5-Methyl-7-(2-methylpropyl)-2-(1-naphthalenylmethyl)-3-propylthio-2H-pyrazolo[3,4-d]pyrimidine-4,6(5H,7H)-dione, or

3-[(3-Hydroxypropyl)thio]-5-methyl-7-(2-methylpropyl)-2-(1-naphthalenylmethyl)-2H-pyrazolo[3,4-d]pyrimidine-4,6(5H,7H)-dione, or

5 Methyl 4-[(4,5,6,7-tetrahydro-5-methyl-7-{2-methylpropyl}-2-{1-naphthalenylmethyl}-4,6-dioxo-2H-pyrazolo[3,4-d]pyrimidin-3-yl)thio]butanoic acid, or

4-[(4,5,6,7-tetrahydro-5-methyl-7-{2-methylpropyl}-2-{1-naphthalenylmethyl}-4,6-dioxo-2H-pyrazolo[3,4-d]pyrimidin-3-yl)thio]butanoic acid, or

10 3-[(3-Hydroxypropyl)thio]-5-methyl-7-(2-methylpropyl)-2-(2-{phenylsulfonylmethyl}phenylmethyl)-2H-pyrazolo[3,4-d]pyrimidine-4,6(5H,7H)-dione, or

2-({5-Chlorobenzo[1,3]dioxol-6-yl}methyl)-3-[(3-hydroxypropyl)thio]-5-methyl-7-(2-methylpropyl)-2H-pyrazolo[3,4-d]pyrimidine-4,6(5H,7H)-dione, or

2-(3-Chloro-2-fluorophenylmethyl)-3-[(3-hydroxypropyl)thio]-5-methyl-7-(2-methylpropyl)-2H-pyrazolo[3,4-d]pyrimidine-4,6(5H,7H)-dione, or

15 3-[(3-Hydroxypropyl)thio]-5-methyl-7-(2-methylpropyl)-2-(2-quinolinylnmethyl)-2H-pyrazolo[3,4-d]pyrimidine-4,6(5H,7H)-dione, or

a pharmaceutically acceptable salt of any one thereof.

9. A process for the preparation of a compound of formula (I) as defined in claim 1 which
20 comprises

(a) reaction of a compound of formula (II):

(II)

in which R^1 , R^2 and R^3 are as defined in formula (I) with a compound of formula (III):

- 5 in which L is a leaving group, Y is sulphur, and X and W are as defined in formula (I), or
 (b) when Y is CH_2CH_2 or $\text{CH}_2\text{CH}=\text{CH}$ and R^3 is $\text{CHR}^4(\text{CH}_2)_n\text{Ar}$, reaction of a compound of formula (IV):

10

(IV)

in which $R^{3'}$ is a precursor to the R^3 group $\text{CHR}^4(\text{CH}_2)_n\text{Ar}$ and R^1 and R^2 are as defined in formula (I), with a compound of formula (V):

15

in which Y is CH_2CH_2 or $\text{CH}_2\text{CH}=\text{CH}$ and W and X are as defined in formula (I), or
 (c) when Y is $\text{C}\equiv\text{C}$, $\text{CH}=\text{CH}$ or $\text{CH}_2\text{CH}=\text{CH}$, reacting a compound of formula (VI):

20

(VI)

in which L^1 represents a leaving group and R^1 , R^2 and R^3 are as defined in formula (I) with a compound of formula (VII) or (VIII):

wherein, in formula (VII), X^a is a bond or C_{1-6} alkylene and W is as defined in formula (I), and wherein, in formula (VIII), W and X are as defined in formula (I), and optionally thereafter:

- converting the compound of formula (I) to a further compound of formula (I), and/or
- forming a pharmaceutically acceptable salt.

10. A pharmaceutical composition comprising a compound of formula (I), or a pharmaceutically acceptable salt thereof, as claimed in any one of claims 1 to 8 in combination with a pharmaceutically acceptable diluent or carrier.

11. A process for the preparation of a pharmaceutical composition as claimed in claim 10 which comprises mixing a compound of formula (I), or a pharmaceutically acceptable salt thereof, as defined in any one of claims 1 to 8 with a pharmaceutically acceptable diluent or carrier.

12. A compound of formula (I), or a pharmaceutically-acceptable salt thereof, as claimed in any one of claims 1 to 8 for use in therapy.

13. Use of a compound of formula (I), or a pharmaceutically-acceptable salt thereof, as claimed in any one of claims 1 to 8 in the manufacture of a medicament for use in therapy.

14. A method of effecting immunosuppression which comprises administering to a patient a therapeutically effective amount of a compound of formula (I), or a pharmaceutically-acceptable salt thereof, as claimed in any one of claims 1 to 8.
